

## Material data sheet PEEK CF30 black

Chemical Designation: Polyetheretherketone  
 DIN-abbreviation: PEEK  
 Colour / Fillers: black opaque / carbon fibres  
 Density: 1,38 g/cm<sup>3</sup>

### Main features

- very high creep resistance
- inherent flame retardant
- good chemical resistance
- improved toughness
- very high stiffness
- resistance against high energy radiation
- hydrolysis and superheatet steam resistant
- high dimensional stability

### Target Industries

- chemical technology
- mechanical engineering
- aircraft and aerospace technology
- automotive industry
- vacuum technology
- oil and gas industry

### Characteristics

| mechanical properties                   | parameter                        | value     | unit              | norm               | comment |
|---|----------------------------------|-----------|-------------------|--------------------|---------|
| Modulus of elasticity<br>(tensile test) | 1 mm / min                       | 6000      | MPa               | DIN EN ISO 527-2   | 1)      |
| Tensile strength                        | 50 mm / min                      | 112       | MPa               | DIN EN ISO 527-2   |         |
| Elongation at break                     | 50 mm / min                      | 10        | %                 | DIN EN ISO 527-2   |         |
| Compression strength                    | 1% / 2% / 5%<br>5 mm / min, 10 N | 25/47/111 | MPa               | EN ISO 604         | 2)      |
| Impact strength (Charpy)                | max. 7,5 J                       | 92        | kJ/m <sup>2</sup> | DIN EN ISO 179-1eU | 3)      |
| Ball indentation hardness               |                                  | 298       | MPa               | ISO 2039-1         | 4)      |

## Material data sheet PEEK CF30 black

| thermal properties           | parameter        | value | unit                             | norm                 | comment |
|------------------------------|------------------|-------|----------------------------------|----------------------|---------|
| Glass transition temperature |                  | 147   | °C                               | DIN EN ISO 11357 1)  |         |
| Melting temperature          |                  | 341   | °C                               | DIN EN ISO 11357     |         |
| Service temperature          | short term       | 300   | °C                               |                      | 2)      |
| Service temperature          | long term        | 260   | °C                               |                      |         |
| Thermal expansion (CLTE)     | 23-60 °C, long   | 4     | 10 <sup>-5</sup> K <sup>-1</sup> | DIN EN ISO 11359-1;2 |         |
| Thermal expansion (CLTE)     | 23-100 °C, long  | 4     | 10 <sup>-5</sup> K <sup>-1</sup> | DIN EN ISO 11359-1;2 |         |
| Thermal expansion (CLTE)     | 100-150 °C, long | 6     | 10 <sup>-5</sup> K <sup>-1</sup> | DIN EN ISO 11359-1;2 |         |
| Specific heat                |                  | 1.2   | J/(g*K)                          | ISO 22007-4:2008     |         |
| Thermal conductivity         |                  | 0.66  | W/(K*m)                          | ISO 22007-4:2008     |         |

| electrical properties | parameter | value                             | unit | norm             | comment |
|-----------------------|-----------|-----------------------------------|------|------------------|---------|

→ PEEK products may be based on Victrex® PEEK or Solvay KetaSpire® polymer

Our information and statements reflect the current state of our knowledge and shall inform about our products and their applications. They do not assure or guarantee chemical resistance, quality of products and their merchantability in a legally binding way. Our products are not defined for use in medical or dental implants. Existing commercial patents have to be observed. The corresponding values and information are no minimum or maximum values, but guideline values that can be used primarily for comparison purposes for material selection. These values are within the normal tolerance range of product properties and do not represent guaranteed property values. Therefore they shall not be used for specification purposes. Unless otherwise noted, these values were determined by tests at reference dimensions (typically rods with diameter 40-60 mm according to DIN EN 15860) on extruded and machined specimen. As the properties depend on the dimensions of the semi-finished products and the orientation in the component (esp. in reinforced grades), the material may not be used without a separate testing under individual circumstances. The customer is solely responsible for the quality and suitability of products for the application and has to test usage and processing prior to use. Technical changes reserved.
